Author Index—Volume 37 (2001)

(The issue number is given in front of page numbers)

Armentano, M.G. and R.G. Durán, Error estimates for moving least square approximations (3) 397–414

Barbeiro, S. and J.A. Ferreira, A non-standard linear finite element method for a planar elasticity problem (3) 331–340

Bendtsen, C., O.H. Nielsen and L.B. Hansen, Solving large nonlinear generalized eigenvalue problems from Density Functional Theory calculations in parallel (1–2) 189–199

Blanes, S., High order numerical integrators for differential equations using composition and processing of low order methods (3) 289–306

Calvo, M.P., J. de Frutos and J. Novo, Linearly implicit Runge–Kutta methods for advection–reaction–diffusion equations (4) 535–549

Cao, Z.-H., On the convergence of non-stationary iterative methods for symmetric positive (semi)definite systems (3) 319–330

Carrington Jr., T., see **Huang, S.-W.** (3) 307–317

Castillo, J.E., J.M. Hyman, M. Shashkov and S. Steinberg, Fourth- and sixth-order conservative finite difference approximations of the divergence and gradient (1–2) 171–187

Chen, J. and X. Xu, The mortar element method for nonselfadjoint parabolic problem (3) 341–358

Chen, J., see **Huang, J.** (4) 519–533

Christiansen, S., Derivation and investigation of fifth order quadrature formulas for biharmonic boundary integral operators (1–2) 145–159

de Frutos, J., see **Calvo, M.P.** (4) 535–549

Dehghan, M., Determination of a control parameter in the two-dimensional diffusion equation (4) 489–502

Dougalis, V.A., see **Pelloni, B.** (1–2) 95–107

Duncan, D.B. and A.R. Soheili, Approximating the Becker–Döring cluster equations (1–2) 1–29

Durán, R.G., see **Armentano, M.G.** (3) 397–414

Eymard, R., T. Gallouët and R. Herbin, Finite volume approximation of elliptic problems and convergence of an approximate gradient (1–2) 31–53

Ferreira, J.A., see **Barbeiro, S.** (3) 331–340

Fröhner, A. and H.-G. Roos, The ε-uniform convergence of a defect correction method on a Shishkin mesh (1–2) 79–94

Fuhrmann, J., Existence and uniqueness of solutions of certain systems of algebraic equations with off-diagonal nonlinearity (3) 359–368

Fuhrmann, J. and H. Langmach, Stability and existence of solutions of time-implicit finite volume schemes for viscous nonlinear conservation laws (1–2) 201–230

Gallouët, T., see **Eymard, R.** (1–2) 31–53

Givoli, D., see **Peres Hari, L.** (1–2) 257–269

Günther, M., M. Hoschek and R. Weiner, ROW methods adapted to a cheap Jacobian (1–2) 231–240

Hansen, L.B., see **Bendtsen, C.** (1–2) 189–199

Hasanov, A. and J.L. Mueller, A numerical method for backward parabolic problems with non-selfadjoint elliptic operators (1–2) 55–78

Herbin, R., see **Eymard, R.** (1–2) 31–53

Holstad, A., The Koren upwind scheme for variable gridsize (4) 459–487

Hoschek, M., see **Günther, M.** (1–2) 231–240

Hu, Q. and D. Yu, Solving singularity problems in unbounded domains by coupling of natural BEM and composite grid FEM (1–2) 127–143

Huang, J., L. Li and J. Chen, On mortar-type Morley element method for plate bending problem (4) 519–533

Huang, S.-W. and T. Carrington Jr., Calculating interior eigenvalues and eigenvectors with an implicitly restarted and a filter diagonalization method (3) 307–317

Hyman, J.M., see **Castillo, J.E.** (1–2) 171–187

John, V., Residual a posteriori error estimates for two-level finite element methods for the Navier–Stokes equations (4) 503–518

Kouibia, A. and M. Pasadas, Approximation by shape preserving interpolation splines (3) 271–288

Langmach, H., see **Fuhrmann, J.** (1–2) 201–230

Li, L., see **Huang, J.** (4) 519–533

Liao, X.X., see **Zhang, C.J.** (1–2) 161–170

Linß, T., Sufficient conditions for uniform convergence on layer-adapted grids (1–2) 241–255

Mueller, J.L., see **Hasanov, A.** (1–2) 55–78

Nielsen, O.H., see **Bendtsen, C.** (1–2) 189–199

Novo, J., see **Calvo, M.P.** (4) 535–549

Pasadas, M., see **Kouibia, A.** (3) 271–288

Pelloni, B. and V.A. Dougalis, Error estimates for a fully discrete spectral scheme for a class of nonlinear, nonlocal dispersive wave equations (1–2) 95–107

Peres Hari, L., D. Givoli and J. Rubinstein, Computation of open Willmore-type surfaces (1–2) 257–269

Roberts, A.J., Holistic discretization ensures fidelity to Burgers' equation (3) 371–396

Roos, H.-G., see **Fröhner, A.** (1–2) 79–94

Rubinstein, J., see **Peres Hari, L.** (1–2) 257–269

Shampine, L.F. and S. Thompson, Solving DDEs in MATLAB (4) 441–458

Shashkov, M., see **Castillo, J.E.** (1–2) 171–187

Soheili, A.R., see **Duncan, D.B.** (1–2) 1–29

Steinberg, S., see **Castillo, J.E.** (1–2) 171–187

Thompson, S., see **Shampine, L.F.** (4) 441–458

Tocci, M.D., Sensitivity analysis of large-scale time dependent PDEs (1–2) 109–125

Weekes, S.L., Numerical computation of wave propagation in dynamic materials (4) 417–440

Weiner, R., see **Günther, M.** (1–2) 231–240

Xu, X., see **Chen, J.** (3) 341–358

Yu, D., see **Hu, Q.** (1–2) 127–143

Zhang, C.J., S.Z. Zhou and X.X. Liao, D-convergence and GDN-stability of Runge–Kutta methods for a class of delay systems (1–2) 161–170

Zhou, S.Z., see **Zhang, C.J.** (1–2) 161–170
